

PComP™

What is PComP™? PComP™ is a nano-composite material that can be used in hard facing applications for wear and corrosion resistance.

High-Rate Coating Fusion. PComP™ can be applied using conventional thermal spray methods and new state-of-the-art methods such as high-density infrared (HDIR), laser, or induction fusion methods.

What is the PComP™ advantage? PComP™ can be used as a drop-in replacement for conventional thermal spray powders with the added advantage that it is lighter weight and more wear resistant.
